

ECO FRIENDLY HOME ENERGY MONITOR

Make a SRS for following case study: A mobile app connected to smart meters and IoT sensors that monitors household energy consumption in real time. Users should be able to view usage trends, receive alerts when consumption spikes, compare their usage with neighbors and get tailored suggestions to reduce waste. The platform should promote energy saving challenges and link to government incentives.

Deliverables:

- 1) Define 4 user requirements and the related system requirements.
- 2) prepare a brief presentation of your work.
